Base Metal Electrode (BME) paste is a specialized conductive paste used in manufacturing Multi-Layer Ceramic Capacitors (MLCCs) with internal electrodes made from base metals, such as nickel. This paste consists of high-purity metal particles, organic binders, and solvents, and it is designed to be compatible with the sintering and co-firing processes needed to form stable, conductive electrode layers. BME pastes are preferred in MLCCs due to their lower cost and compatibility with high-volume production, while offering excellent electrical conductivity and reliability.
