Abstracts

The global Patch Biosensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Biosensors include three main components: identification elements that identify analytes and generate signals, signal sensors, and readers that measure and quantify the received signals. Biological receptors such as antibodies, nucleotides, enzymes or proteins can be used as recognition molecules that can bind or interact with target analytes or biomarkers. Signal sensors function through a variety of different physical and chemical properties, including electronic, electrochemical, optical or magnetic output signals. This report studies the patch type biosensor, which receives the measured signal through the patch method.

This report studies the global Patch Biosensor production, demand, key manufacturers, and key regions.
