The global Patella Tendon Rupture Patch for Knee Arthroplasty market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Patellar tendon injury is caused by multiple factors, and is usually seen in patients with a history of multiple knee operations, such patients are accompanied by multiple systemic diseases, such as long-term use of steroids or diabetes; Excessive stress on the patellar tendon and its insertion in order to achieve patellar valgus and knee flexion can also lead to patellar tendon injury. Many clinicians have adopted the synthetic mesh technique as the gold standard for patellar tendon rupture reconstruction after TKA. The technique of patellar tendon rupture patch in the treatment of patellar tendon rupture is to create a groove on the anteromedial side of the tibia to fix the patch, pass the patch from the lower side of the patellar tendon to the outside and suture the broken end of the patellar tendon, and cover the patella upward and fix it to the In front of the quadriceps tendon; free the vastus medialis and medial retinaculum, so that these medial soft tissues can be covered and fixed in front of the mesh in a 'pants-vest' manner, so that the distal joint capsule can completely cover the mesh.
