According to our (Global Info Research) latest study, the global Patent Infringement Analysis market size was valued at US\$ 1429 million in 2025 and is forecast to a readjusted size of US\$ 2135 million by 2032 with a CAGR of 6.1% during review period.

Patent infringement analysis is a professional intellectual property analysis activity that involves technically dissecting a target product, technical solution, or business method and comparing it item by item with the claims of authorized patents to determine whether it falls within the scope of protection of another's patent. Its core includes patent search, claim interpretation, technical feature mapping, equivalence principle assessment, and legal risk evaluation, ultimately outputting a professional conclusion on whether infringement has occurred or the potential for infringement. It is commonly used in Free Trade Agreements (FTOs), litigation prediction, and product compliance review.

With intensifying global technological competition and continuously increasing patent density, patent infringement analysis is rapidly evolving from a traditional legal search service into a core risk control tool for corporate R&D and market entry, especially in high-patent-intensive industries such as semiconductors, communications, medical devices, and new energy, where demand continues to grow. Simultaneously, AI technology is driving the field towards automation and data-driven transformation, significantly improving the efficiency of infringement comparison, patent mapping, and risk prediction. In the future, patent infringement analysis will further become a key infrastructure in corporate globalization strategies, technology acquisition decisions, and compliance management systems.
