According to our (Global Info Research) latest study, the global Patentability Search Service market size was valued at US\$ 1794 million in 2025 and is forecast to a readjusted size of US\$ 3059 million by 2032 with a CAGR of 8.0% during review period.

Patentability search service refers to a professional information service that systematically searches global patent documents and non-patent documents for an invention or a technical solution to be patented, in order to find existing technologies that may affect its novelty and creativity. Its core purpose is to assess the possibility of obtaining patent authorization for the technical solution and provide key evidence and support for subsequent patent applications, technical briefing document modifications or R&D decisions.

With the continuous increase in global R&D investment and record-breaking patent applications, patent search services are rapidly evolving from traditional "manual search and consultation services" to "AI-driven intelligent intellectual property analysis services." In high-innovation-density industries such as artificial intelligence, semiconductors, biomedicine, and new energy, companies are increasingly relying on high-quality pre-emptive patent searches to reduce the risk of patent failure and avoid redundant R&D, thus driving continued market demand growth. Simultaneously, AI technologies (NLP, semantic search, and graph analysis) significantly improve search efficiency, gradually platformizing and automating the work that previously relied on experienced searchers. In the future, this industry will upgrade from a single "search service" to a comprehensive decision-making system encompassing "IP intelligence + competitive analysis + technology roadmap planning." The market will continue to develop towards high-end, software-based, and AI-driven solutions, becoming one of

the standard infrastructures in corporate R&D systems.
