Pathology is the medical discipline that provides diagnostic information to patients and clinicians. It impacts nearly all aspects of patient care, from diagnosing cancer to managing chronic diseases through accurate laboratory testing. Pathologists use gross, microscopic, immunologic, genetic and molecular modalities to determine the presence of disease, and frequently work closely with surgeons, radiologists, and oncologists. Pathologists can sub-specialize in different areas, such as gastroenterology, gynecologic pathology, blood diseases, clotting disorders, microbiology, lung and breast cancers, and more. For every sub-specialty in medicine or surgery, there is a pathologist counterpart, helping to make the correct diagnosis and guide the care of the patient.

In this report, we only study pathology diagnosis device which mainly used in histopathology, cytopathology, Immunohistochemistry, molecular pathology. There are many types of subdivided products, mainly includes tissue processor, embedding machine, dyeing machine, microscope image analysis system, etc.
