## Abstracts

The global Patient Data Management Systems (PDMS) market size is expected to reach \$ 2600 million by 2032, rising at a market growth of 10.9% CAGR during the forecast period (2026-2032).

A PDMS is a computer-based information system which facilitates the collection, integration, retrieval and interpretation of the multi-source (e.g. hospital information system, laboratory system, bedside devices) multi-variant (e.g. images, numbers, text) data found in intensive care units. A PDMS is considered a medical product performing calculations or interpretations of patient-specific data for diagnostic or therapeutic purposes, e.g. dosage of medication. PDM systems can support clinicians in their everyday work, in a way that is not possible with paper-based documentation.

Global Patient Data Management Systems (PDMS) key players include Philips Healthcare, GE Healthcare, Siemens Healthineers, Dr?ger, etc. Global top four manufacturers hold a share about 50%. North America is the largest market, with a share over 60%, followed by Asia-Pacific and Europe, both have a share about 30 percent. In terms of product, Single Function System is the largest segment, with a share over 60%. And in terms of application, the largest application is ICUs, followed by General Ward.

The global Patient Data Management Systems (PDMS) market is experiencing robust growth, driven by the increasing adoption of electronic health records (EHRs) and the growing need for efficient management of patient data in healthcare facilities. As healthcare providers seek to improve patient care and streamline operations, the demand for advanced PDMS solutions that enable real-time data access, integration, and analysis is rising. The shift towards value-based care, where outcomes and patient

satisfaction are prioritized, has further accelerated the adoption of PDMS, as these systems facilitate better decision-making, enhance clinical workflows, and ensure compliance with regulatory standards.

Moreover, the COVID-19 pandemic has underscored the importance of digital healthcare solutions, leading to a surge in the deployment of PDMS across hospitals and clinics worldwide. The pandemic highlighted the need for seamless data exchange and remote patient monitoring, pushing the market towards cloud-based and interoperable solutions. Additionally, advancements in artificial intelligence (AI) and machine learning are being integrated into PDMS, enabling predictive analytics and personalized medicine. However, challenges such as data privacy concerns and high implementation costs remain, but ongoing innovations and government initiatives supporting healthcare digitization are expected to sustain the market's growth trajectory in the coming years.
