The global Patient Management and Monitoring App market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A patient management and monitoring app is a software application that helps healthcare providers and patients streamline the management and monitoring of healthcare services. It typically includes features such as:

Patient profiles: The app stores and organizes patient information, including medical history, demographics, and contact details.

Appointment scheduling: Patients can schedule and manage their appointments with healthcare providers, reducing the need for phone calls or in-person visits.

Electronic health records (EHR): The app allows healthcare providers to access and update patient records electronically, facilitating efficient and accurate documentation.

Prescription management: Providers can electronically prescribe medications, and patients can receive reminders and track their medication adherence.

Remote monitoring: The app enables remote monitoring of patients' health parameters, such as vital signs, through wearable devices or connected medical devices. Data can be transmitted in real-time, allowing healthcare providers to monitor patients' conditions and intervene as needed.

Communication and messaging: Secure messaging features enable secure

communication between patients and healthcare providers, facilitating quick consultations and addressing non-emergency concerns.

Health education and resources: The app may provide educational materials, resources, and personalized recommendations to help patients manage their health and make informed decisions.

Integration with other healthcare systems: Integration with hospital information systems, laboratory systems, or health insurance systems can enhance data sharing, streamline workflows, and improve coordination of care.
