Abstracts

Patient Portals are healthcare-related online applications that allow patients to interact and communicate with their healthcare providers, such as physicians and hospitals. Typically, portal services are available on the Internet at all hours of the day and night.

Scope of the Report:

This report studies the Patient Portal market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Patient Portal market by product type and applications/end industries.
Integrated patient portals operate as a module added onto an existing EMR/EHR (electronic medical records/electronic health records) or any other healthcare IT system. Integrated portals are estimated to account for the largest share of the global market, by type, in 2018. This large share can be attributed to the fact that these solutions offer increased efficiency and low requirement of expensive custom development to build a bridge between systems. Most integrated portals are provided by the same vendor as an EHR system. Moreover, these solutions allow a user to complete multiple business functions from within the same interface. As they provide a one-stop solution, they are cheaper, favored, and therefore high in demand.
The global Patient Portal market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend
