Abstracts

The global Patient Record Management market size is expected to reach \$ 40204 million by 2032, rising at a market growth of 7.7% CAGR during the forecast period (2026-2032).

Medical record management refers to the management activities and systems for collecting, storing, organizing, updating, accessing, sharing, and archiving various medical information generated by patients throughout the entire diagnosis and treatment process. Its core objective is to ensure that patient medical record information is fully recorded, accurately tracked, securely stored, and efficiently used throughout the entire medical service process, thereby supporting clinical diagnosis and treatment, nursing management, medical collaboration, quality control, and compliance auditing.

Gross Margin Levels

The medical record management industry as a whole belongs to the mid-to-high gross margin segment of medical software and health information technology, but there are significant internal differences. If vendors primarily offer cloud-based, standardized, and replicable outpatient EHR/EMR SaaS, their gross margins are typically higher. Conversely, if their business focuses on large-scale hospital-level EPR/EHR, deep customization, interface development, data migration, and long-term implementation services, their gross margins will be lowered by project delivery and localization costs. Among publicly available samples, WELL Health's adjusted gross margin in 2025 was 44.2%; CompuGroup Medical's EBITDA margin in Q1 2025 was 18%, and recurring revenue accounted for 78%, indicating that these vendors have a strong software revenue base but still bear implementation and operating costs. Based on these publicly available benchmarks, a comprehensive gross margin of approximately 45%-65% is

reasonable for the medical record management industry: standardized SaaS outpatient platforms typically reach 55%-75%, while hospital-level, heavily implemented projects are generally closer to 35%-55%.

Industry Drivers

The growth of the medical record management (EHR) industry is primarily driven by several key factors. First, the demand for interoperability and Health Information Exchange (HIE) continues to rise, with healthcare institutions increasingly emphasizing continuous patient records across hospital campuses, specialties, and nursing scenarios. Second, national digital health initiatives and policies are driving the increasing adoption of electronic medical records, structured data, electronic prescriptions, and patient-accessible records in more and more regions. Third, the accelerated integration of clinical decision support, analytics tools, and AI-powered documentation capabilities is transforming EHR systems from mere 'information storage tools' into 'clinical operation platforms.' Fourth, cloud deployment and multi-institutional group operations are propelling more institutions to migrate from traditional on-premises systems to SaaS or hybrid cloud architectures. Public research also clearly indicates that key drivers of EHR market growth include interoperability, health information exchange, integration with clinical decision support and analytics tools, and the advancement of national digital health initiatives.

This report studies the global Patient Record Management demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Patient Record Management, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Patient Record Management that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Patient Record Management total market, 2021-2032, (USD Million)

Global Patient Record Management total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Patient Record Management total market, key domestic companies, and share, (USD Million)

Global Patient Record Management revenue by player, revenue and market share 2021-2026, (USD Million)

Global Patient Record Management total market by Type, CAGR, 2021-2032, (USD Million)

Global Patient Record Management total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Patient Record Management market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Epic Systems (USA), Oracle Health (USA), MEDITECH (USA), Dedalus (Italy), CompuGroup Medical (Germany), athenahealth (USA), eClinicalWorks (USA), NextGen Healthcare (USA), Veradigm (USA), InterSystems (USA), etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Patient Record Management market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
