According to our (Global Info Research) latest study, the global Patient Temperature Monitoring market size was valued at USD 1605.2 million in 2023 and is forecast to a readjusted size of USD 2184.1 million by 2030 with a CAGR of 4.5% during review period.

This report mainly focuses on patient temperature monitoring market. Temperature monitoring is a fundamental skill used by nurses in clinical practice. It is a vital sign that is significant and must be acknowledged as such. Using the right equipment and the correct route of measurement, ie the ear (tympanic thermometer), is important for obtaining an accurate reading.

The world population continues to grow. Population growth is associated with a significant increase in population density in an area, thereby facilitating the spread of infectious diseases and viruses. Currently (as of 2022), SARS, COVID-19, tuberculosis (TB), malaria, pneumonia, dengue fever, HIV, and pertussis are the most prevalent infectious diseases and viruses in the world, and the incidence is expected to increase globally. Older adults and children are most vulnerable to this type of infection. These infectious diseases are accompanied by characteristic changes in body temperature. Therefore, timely monitoring of body temperature can effectively diagnose and treat these diseases.
