Abstracts

According to our (Global Info Research) latest study, the global Patterned Sapphire Substrate (PSS) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Patterned Sapphire Substrates (PSS) is a micro-patterned sapphire substrate used for GaN-based light-emitting diodes(LEDs). PSS with small structures greatly improves the light extraction efficiency of finished devices. PSS also solves critical problems such as crystal dislocations and refractive index mismatch.

There are two different manufacturing processes to fabricate PSS in the industry, dry plasma etching and wet chemical etching. Today, the majority of PSS products are produced by dry plasma etching due to its inherently effective control of precision and uniformity.
