## Abstracts

Human capital management (HCM) is the comprehensive set of practices for recruiting, managing, developing and optimizing the human resources of an organization. HCM has come to be nearly synonymous with the human resources (HR) function in organizations. In HR technology, the comprehensive software systems for managing HR processes differ little from HCM suites.
Payroll software is a system that automates and streamlines the process of paying a company?s employees. It may sound straightforward, but the payroll process includes a lot of tasks such as calculating deductions and withholdings, producing pay slips and tax forms (and other reports), processing or depositing payment directly to employee?s bank account, voiding payments if need be, and even printing checks. Payroll software simplifies and automates the aforementioned tasks to shorten cycle times and reduce manual errors.

This report studies the HR and Payroll Software.
