The global PBAT Degradable Plastic market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PBAT is a thermoplastic degradable plastic, generally using aliphatic acid and butylene glycol as raw materials, and is produced through petrochemical or biological fermentation. It has good ductility and elongation at break, as well as good heat resistance and impact performance. Because PBAT has good film-forming performance and is easy to blow film, it is widely used in the field of disposable packaging film and agricultural film. In addition, PBAT also has excellent biodegradability, is very active in the research of degradable plastics and one of the best degradable materials in the market.
