According to our (Global Info Research) latest study, the global PBAT Masterbatch market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PBAT masterbatch is a raw material for biodegradable plastics. It is a granular material made of polybutylene succinate (PBAT) as the main component. PBAT is a biodegradable polyester material with good biodegradability and plasticity. It can be degraded by microorganisms under certain environmental conditions, reducing its impact on the environment. PBAT masterbatch is usually used to produce biodegradable plastic products, such as biodegradable plastic bags, biodegradable packaging materials, etc. It is degradable and environmentally friendly, and is gradually being widely used in the production of plastic products and replacing traditional plastic materials. The production process and formula of PBAT masterbatch can be adjusted according to specific needs to meet the requirements of different biodegradable plastic products.
