## Abstracts

The global PBI Compounds market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PBI compounds, also known as polybenzimidazole compounds, are high-performance polymers that offer exceptional thermal and chemical resistance properties. PBI is a synthetic polymer composed of repeating benzimidazole units. It has a unique structure that contributes to its outstanding mechanical and physical properties. PBI compounds are widely used in various industries due to their excellent heat stability and flame resistance. They have a high glass transition temperature (T<sub>g</sub>) of around 400°C, which means they can withstand extreme temperatures without significant degradation. This makes them suitable for applications involving high-temperature environments such as aerospace, automotive, and electronics.
