According to our (Global Info Research) latest study, the global PC Core Hardware market size was valued at US\$ 144130 million in 2025 and is forecast to a readjusted size of US\$ 179011 million by 2032 with a CAGR of 3.1% during review period.

PC Core Hardware refers to the essential electronic components that form the foundation of personal computers (desktops, laptops and workstations), including CPUs, GPUs (graphics cards), motherboards, memory (DRAM), storage devices (HDD/SSD) and power supplies. These components collectively handle computing, graphics processing, data storage and system control, and represent the core drivers of PC performance and technological evolution, closely tied to semiconductor processes, chip architecture and system integration capabilities. The PC core hardware industry chain begins with upstream semiconductor manufacturing, including wafers, equipment and materials; the midstream includes chip design (CPU, GPU and controllers) and module manufacturing (motherboards, memory and storage devices); downstream products are integrated by PC OEMs, system integrators and distribution channels to serve consumer and enterprise IT markets.
