Abstracts

According to our (Global Info Research) latest study, the global PC Optical Diffuser Film market size was valued at US\$ 198 million in 2024 and is forecast to a readjusted size of USD 248 million by 2031 with a CAGR of 3.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

PC optical diffuser film is based on polycarbonate (PC). Through a specific production process, a uniform functional coating and a non-uniform anti-stick coating are formed on the two surfaces of the film. When light passes through these coatings continuously, due to the diffuse reflection and diffusion of the non-uniform structure medium, the point light source can be transformed into a uniform surface light source, thereby achieving the effect of light diffusion.
