A stick PC or PC on a stick is a single-board computer in a small elongated casing resembling a stick, that can usually be plugged directly (without an HDMI cable) into an HDMI video port. A stick PC is a device which has independent CPUs or processing chips and which does not rely on another computer. It should not be confused with passive storage devices such as thumb drives.

A stick PC can be connected to a peripheral device such as a monitor, TV, or kiosk display to produce visual or audio output. Stick PCs generally have limited computing power and are not suited for intensive tasks, but can be suitable in other applications that do not require such power.

The Global Info Research report includes an overview of the development of the PC Stick industry chain, the market status of Home Use (Intel Atom Processor, Core M Processor), Commercial Use (Intel Atom Processor, Core M Processor), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of PC Stick.

Regionally, the report analyzes the PC Stick markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global PC Stick market, with robust domestic demand, supportive policies, and a strong manufacturing base.
