## Abstracts

According to our (Global Info Research) latest study, the global PC Water and Liquid Cooling System market size was valued at US\$ 212 million in 2024 and is forecast to a readjusted size of USD 303 million by 2031 with a CAGR of 5.3% during review period.

The liquid cooling systems in a computer are a lot like the internal combustion engines found in most vehicles. A water-block is first set up on the CPU and through this the cooling water runs through the CPU before making its way to a radiator. Often, the radiator itself needs cooling of its own and is kept cool by a fan or a Peltier cooler. Liquid cooling is fairly complex method and is rarely used in computers despite its efficiency. The real danger that comes with liquid cooling is that in case of a coolant leak, the water can seep through to all the critical parts of the computer and can irreversibly damage your CPU.

Global PC Water and Liquid Cooling System main manufacturers include Corsair, Cooler Master and DeepCool, etc., totally holding a share for 65% of the market. China is the largest market of PC Water and Liquid Cooling, with a share about 58%. As for the types of products, it can be divided into triple radiator liquid cooling system, dual radiator liquid cooling system and single radiator liquid cooling system. The most common product is dual radiator liquid cooling system, with a share over 40%. In terms of applications, it is widely used in online sales and offline store sales. The most common application is in offline store sales, with a share over 74%.
