The global PCB Entry and Backup Boards market size is expected to reach \$ 980 million by 2032, rising at a market growth of 9.7% CAGR during the forecast period (2026-2032).

Global sales of PCB Entry and Backup Boards was about 198.10 million ? in 2025 with average price of 2.48 USD/?. The average gross margin of the industry is between 20%-25%. China is the largesr producer and consumers of PCB Entry and Backup Boards.

PCB Entry Boards are the upper auxiliary sheet used during PCB drilling. Its main function is to guide the drill bit at the entry point, reduce drill wander, improve hole-position accuracy, minimize entry burrs and surface scratches, and protect the copper-clad laminate. Common materials include aluminum sheet, lubricated aluminum sheet, coated aluminum sheet, phenolic entry sheet, and composite entry materials.

PCB Backup Boards are the lower supporting board used beneath the PCB stack during mechanical drilling. Its main function is to support the drill bit as it exits the PCB, reduce exit burrs, prevent breakout or delamination at the hole exit, protect the drilling machine table, and help maintain hole wall quality. Common materials include phenolic paper laminate, wood pulp board, melamine board, fiberboard, composite backup board, and resin-based backup materials.
