According to our (Global Info Research) latest study, the global PCB Epoxy Resin Conformal Coating market size was valued at US\$ 63.72 million in 2025 and is forecast to a readjusted size of US\$ 104 million by 2032 with a CAGR of 6.7% during review period.

PCB epoxy resin conformal coating is a high-protection conformal coating material used in electronic assembly, typically formulated as a two-part epoxy, modified epoxy or UV/heat-curable epoxy system. After curing, it forms a hard, dense and strongly adherent insulating film on PCB surfaces. In 2025, the global PCB epoxy resin conformal coating sales is estimated at 2,887 tons, with an average selling price of approximately 21.45 US\$/kg. The PCB epoxy resin conformal coating value chain includes upstream epoxy resins, modified resins, curing agents, diluents, solvents, flame retardants, UV tracers and functional additives.

Growth in the PCB epoxy resin conformal coating market is mainly driven by the expansion of high-reliability electronics. Automotive electronics, EV control systems, charging infrastructure, industrial automation, energy storage inverters, communication equipment, defense electronics and aerospace electronics are increasingly exposed to humidity, salt spray, chemical contamination, vibration and thermal cycling, which raises requirements for insulation stability and corrosion resistance. While acrylic conformal coatings are sufficient for many consumer and general industrial electronics, epoxy systems offer stronger protection in applications requiring chemical resistance, abrasion resistance and long-term reliability. As PCB assembly density increases, component spacing narrows and outdoor electronics become more common, the cost of electronic failure rises, encouraging customers to select coatings based on reliability grade rather

than only material cost.
