According to our (Global Info Research) latest study, the global PCB Micro Drills market size was valued at US\$ 495 million in 2025 and is forecast to a readjusted size of US\$ 667 million by 2032 with a CAGR of 4.4% during review period.

Printed Circuit Board (PCB) is an indispensable part of electronic products and is mainly used for the support and connection of electronic components. PCB micro drills are defined based on drill bit diameter. According to IPC requirements, drill bits with a diameter $\geq 0.35\text{mm}$ are called micro drills. At present, the micro drills used in the PCB industry can be divided into two categories: ST type and UC type according to different structures. Under the same processing conditions, UC type micro drills have gradually become the mainstream of the industry because they can improve the quality of the hole wall. With the development of the electronics industry, simple carbide micro-drills can no longer meet the increasingly stringent quality requirements, and subsequently, the use of coated micro-drills has gradually increased.

This report is a detailed and comprehensive analysis for global PCB Micro Drills market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
