PCB-mounted relays are integral components in electronic circuits, providing the ability to control high-power devices with low-power signals. PCB relays use industry-standard SIP and DIP packaging technology and can be used directly on printed circuit boards. PCB solid-state relays also have the advantages of small size, easy installation, and low price. Depending on the output power, the housing of PCB solid-state relays can be metal or plastic. Since they generate very little heat, there is usually no need to install an additional heat sink.
