According to our (Global Info Research) latest study, the global PCB Waste Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PCBs are a group of man-made chemicals that have been used in hundreds of products, including electrical equipment, plasticizers and dyes/pigments. They were manufactured in the United States from 1929 until intentional manufacturing was banned in 1979. PCBs, if released into the environment, persist for long periods of time and can bioaccumulate (i.e., increase in concentration) in small organisms and in fish over time. People and animals who consume PCBs may be exposed to PCBs. PCBs have been shown to cause cancer in animals and adversely impact their immune, reproductive, nervous and endocrine systems. Studies have also shown that PCBs may have carcinogenic and other adverse effects in humans as well. The Report mainly study PCB waste services.

In South America and Europe market, key players of PCB waste services include SGS, Orion BV, Celtic Recycling, CSG, etc. Top five manufacturers hold a share over 69%. In terms of product, abandoned device containing PCBs is the largest segment, with a share over 93%. And in terms of method, the largest application is high temperature combustion, with a share over 64%, followed by landfilling.
