Abstracts

The global PCBN Composite Sheet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The PCBN composite sheet is usually composed of base material and coating. The base material provides strong support and impact resistance. The coating is located on the base material and provides extremely high hardness and cutting performance. The PCBN composite sheet has excellent cutting performance and service life, and is widely used.

The PCBN composite sheet is sintered by CBN micropowder and a small amount of binder under high temperature and high pressure. Its hardness is uniform and non-directional. The hardness is second only to artificial diamond, and it has extremely high thermal stability and chemical inertness.

This report studies the global PCBN Composite Sheet production, demand, key manufacturers, and key regions.
