Abstracts

The global PCD Blanks for Cutting Tools market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The hardness and wear resistance of PCD cutting tool blanks are the same as those of natural diamond, and the toughness is the same as that of cemented carbide. The surface of the workpiece processed by this tool is smooth without grinding. It is an ideal tool material with long life and high efficiency, and is mainly used in the mold industry to process non-ferrous metals, composite materials and wear-resistant parts.

PCD cutting tool blanks are sintered at high temperature with selected diamond particles, consisting of a diamond layer and a tungsten carbide matrix.

This report studies the global PCD Blanks for Cutting Tools production, demand, key manufacturers, and key regions.
