According to our (Global Info Research) latest study, the global PCD market size was valued at USD 1408.6 million in 2023 and is forecast to a readjusted size of USD 2149.1 million by 2030 with a CAGR of 6.2% during review period.

Polycrystalline diamond compact (PDC) materials are made by high pressure and high temperature (HPHT) technology. PDC materials have been widely used in several industries. Wear resistance is a key material property that has long been pursued for its valuable industrial applications.

Oil prices have experienced significant volatility in recent years. Factors such as geopolitical tensions, global supply-demand dynamics, production cuts, and economic conditions impact oil prices. The COVID-19 pandemic, in particular, caused a sharp decline in demand and prices, followed by a gradual recovery as economies reopen and demand picks up. The global energy landscape is undergoing a transition towards cleaner and more sustainable sources of energy. This transition is driven by factors such as climate change concerns, renewable energy advancements, and government policies promoting decarbonization. Oil and gas companies are increasingly diversifying their portfolios to include renewable energy sources and investing in low-carbon technologies. Oil and gas companies are focusing on improving operational efficiency and reducing costs. Technologies such as data analytics, artificial intelligence, and automation are being employed to optimize production, enhance asset performance, and streamline operations. Energy efficiency measures are also being adopted to reduce environmental impact and improve sustainability.
