PCI Express (Peripheral Component Interconnect Express) is a high-speed serial computer expansion bus standard, designed to replace the older PCI, PCI-X and AGP bus standards. The basic function of PCI Express (PCIe) Switch is to expand the connectivity to allow more end devices being reached by host controllers in terms of PCIe serial interconnect architecture. Typical applications for the PCI Express (PCIe) Switch include data center equipment, GPU workstations/servers, GPU arrays, pooled storage/compute/networking, multi-host architectures, JBOF, PCIe SSD enclosures, Flash arrays, high-density servers and automotive interconnect.

According to our (Global Info Research) latest study, the global PCIe Switch Chips market size was valued at US$ 1034 million in 2023 and is forecast to a readjusted size of USD 2412 million by 2030 with a CAGR of 12.2% during review period.

The core global PCIe switching chip manufacturers include Broadcom, Microchip, Texas Instruments, ASMedia, Diodes and ON Semiconductor. The top three manufacturers account for approximately 72% of the global share. Broadcom is the world's largest manufacturer of PCIe switching chips, with a market share of approximately 44%.

From a production perspective, China is the world's largest PCIe switch chip production region, accounting for nearly 46% of the market share. The second and third places are North America and Taiwan, China, accounting for 16% and 15% respectively.

In terms of product type, PCIe 3.0 occupies a dominant position, accounting for 47% of the market share. At the same time, in terms of applications, servers are the largest application area, accounting for 65%.
