Abstracts

According to our (Global Info Research) latest study, the global PCR-based Mycoplasma Testing Service market size was valued at US\$ 691 million in 2025 and is forecast to a readjusted size of US\$ 936 million by 2032 with a CAGR of 4.2% during review period.

PCR-based Mycoplasma Testing Service refers to outsourced laboratory testing services that use PCR, qPCR, or RT-PCR technologies to detect mycoplasma contamination in cell cultures, biologics, vaccines, viral vectors, cell therapy products, raw materials, and research samples. The service provides rapid, sensitive, and specific detection by amplifying mycoplasma DNA or RNA targets. Compared with traditional culture-based methods, PCR-based testing offers shorter turnaround time, higher sensitivity, and better suitability for biopharmaceutical quality control, cell bank release testing, GMP production monitoring, and contamination investigation. The industrial chain of PCR-based Mycoplasma Testing Service includes upstream PCR reagents, primers, probes, nucleic acid extraction kits, enzymes, controls, sample tubes, PCR instruments, qPCR systems, laboratory consumables, cleanroom facilities, and quality management systems. The midstream includes sample receipt, nucleic acid extraction, PCR amplification, assay validation, contamination control, result interpretation, report generation, data review, and regulatory documentation. Downstream applications include biopharmaceutical companies, vaccine manufacturers, cell and gene therapy developers, contract manufacturing organizations, cell banks, research institutes, diagnostic laboratories, and academic laboratories. Related services include method validation, GMP testing, rapid release testing, deviation investigation, contamination source analysis, and technical consulting.
