Overall, the use of PCR plastics in the production of polycarbonate provides a more sustainable and environmentally friendly solution while still maintaining the high performance and durability of the material.

The full name of PCR is Post-Consumer Recycled material, that is, the recycling of consumer plastics, such as PET, PE, PP, HDPE, etc., and then processing the plastic raw materials used to make new packaging materials. Recycling of waste plastics generated by consumer products such as lunch boxes, shampoo bottles, mineral water bottles, washing machine tubs, etc. PCR (Post-Consumer Recycled) plastics are recycled materials that have been previously used by consumers and then recycled to be used again as raw material. PCR plastics can be used in the production of various types of plastics, including polycarbonate.
