Abstracts

PD-1 inhibitors, including PD-1 antibodies and PD-L1 antibodies, are a new class of immunotherapy drugs. The main mechanism of action is to block the interaction between PD-1 and PD-L1, because the interaction of these two proteins will help tumors escape the pursuit of the immune system, a typical 'helping evil'. PD-1/PD-L1 antibodies, by blocking this 'sinful connection', promote the patient's own immune system to kill tumors.
