Abstracts

The global PDH Equipment market size is expected to reach \$ 3519.6 million by 2029, rising at a market growth of 5.7% CAGR during the forecast period (2023-2029).

In 2022, China's propylene industry will add 6.11 million tons/year of new production capacity, a year-on-year increase of 12%. The new production capacity will be mainly based on the PDH process, followed by the steam cracking process. As of 2022, PDH production capacity has surpassed catalytic cracking and coal (methanol) to olefins, becoming the second most mainstream process after steam cracking. It is expected that during the '14th Five-Year Plan' period, domestic propylene production capacity will continue to expand, and production capacity growth will continue the 'lightweight' development route.

The PDH device is the process of dehydrogenating propane to produce propylene. In addition to the main product propylene, there will also be by-product hydrogen resources. This is also one of the devices with the largest by-product hydrogen resources in chemical production.

This report studies the global PDH Equipment production, demand, key manufacturers, and key regions.
