## Abstracts

According to our (Global Info Research) latest study, the global PDO (Polydioxanone) Aesthetic Threads market size was valued at US\$ 642 million in 2025 and is forecast to a readjusted size of US\$ 1008 million by 2032 with a CAGR of 6.7% during review period.

PDO Aesthetic Threads are a type of non-invasive cosmetic treatment that involves the use of dissolving sutures to lift and tighten sagging skin. The procedure is typically performed under local anesthesia, and can be used on various areas of the body such as the face, neck, arms or abdomen. PDO threads stimulate collagen production which helps improve the texture and appearance of the treated area over time.

The PDO thread market has experienced significant growth in recent years due to increasing demand for minimally invasive cosmetic procedures. Factors contributing to this growth include rising awareness among consumers about the benefits of minimally invasive cosmetic treatments, advancements in technology, and expanding distribution channels through dermatologists, plastic surgeons, and other specialized clinics. Additionally, a growing number of people are choosing to opt for non-invasive alternatives to traditional facelifts due to concerns about scarring and downtime associated with more extensive procedures.

Geographically, North America accounted for the largest share of the PDO thread market due to high adoption rates and availability of advanced technologies in countries such as the United States and Canada. However, Asia Pacific is projected to witness rapid growth during the forecast period due to increasing disposable income levels and improving accessibility to quality healthcare services in emerging economies like China

and India.

Overall, the PDO thread market is expected to continue its strong growth trajectory driven by consumer preferences for minimal intervention and quick recovery times when seeking cosmetic.
