The global PDO Threads market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PDO refer to polydioxanone, which is a common chemical compound that has been used in surgical settings, specifically the suturing of incisions, for years. Now, polydioxanone has found a new life in mint thread lift treatments that perfect the appearance of skin and restore a youthful visage. PDO Threads lift are a type of non-invasive and non-surgical cosmetic treatment that helps reverse the visible signs of aging on the face and neck. It's a cheaper and faster alternative to facelift surgery, but the results don't last as long and aren't as dramatic.
