## Abstracts

According to our (Global Info Research) latest study, the global PE Heat Shrinkable Film market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

PE (Polyethylene) heat shrinkable film is a type of plastic film that has been treated to shrink when exposed to heat. It is made from polyethylene resin, which is a thermoplastic polymer. This film is widely used in packaging applications due to its excellent shrink properties and versatility.

PE heat shrinkable film is manufactured through a process known as extrusion. During extrusion, the polyethylene resin is melted and formed into a continuous sheet of film. The film is then cooled, stretched (biaxially oriented) in both machine and transverse directions, and finally heated to induce the shrinkage properties.
