The global PE Heat Shrinkable Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PE (Polyethylene) heat shrinkable film is a type of plastic film that has been treated to shrink when exposed to heat. It is made from polyethylene resin, which is a thermoplastic polymer. This film is widely used in packaging applications due to its excellent shrink properties and versatility.

PE heat shrinkable film is manufactured through a process known as extrusion. During extrusion, the polyethylene resin is melted and formed into a continuous sheet of film. The film is then cooled, stretched (biaxially oriented) in both machine and transverse directions, and finally heated to induce the shrinkage properties.

This report studies the global PE Heat Shrinkable Film production, demand, key manufacturers, and key regions.
