Abstracts

The global PE Substrat Trennfolie market size is expected to reach \$ 5927 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, the global production of PE-based release film reached 8.5 billion square meters, with an average price of USD 0.45 per square meter, a production capacity of 10.5 billion square meters, and a gross margin of 28%.

PE-based release film is a functional film material made from polyethylene (PE) film as the substrate, coated with silicone or non-silicone release layers to provide controlled release properties. It is widely used in adhesive products, electronic materials, medical and hygiene applications, and industrial protection, serving to protect adhesive surfaces and enable clean removal during use.

The PE-based release film market benefits from the continuous growth of adhesive products, consumer electronics, and new energy industries, with rapidly increasing demand in labels, tapes, optical protective films, and lithium battery materials. Asia (especially China, Japan, and South Korea) is the major production and consumption hub, while Europe and North America maintain stable demand in high-end electronics and medical applications. The industry is characterized by simultaneous expansion in scale and advancement toward high-end products, with future demand focusing on high cleanliness, stable release performance, and environmentally friendly coating materials.
