The double-line foot-operated pulse sealer is a device that seals by the pulse heating principle. It adopts a double-line design and seals by two heating lines at the same time, which can provide stronger sealing force and higher sealing tightness. The equipment is operated by foot control and is suitable for small batch production and packaging tasks with high sealing requirements. The double-line design makes the seal more secure and is often used for packaging thicker materials or materials that require higher sealing strength, such as plastic bags, aluminum foil bags, etc. It is widely used in food, medicine, cosmetics and other industries to ensure the efficiency and stability of the sealing effect.
