## Abstracts

According to our (Global Info Research) latest study, the global Pedal Sensors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The pedal sensor tracks the movement of the gas pedal which sends signals to the car's computer. The computer then uses that information to adjust the air-fuel mixture according to the gas pedal position, current speed, the air temperature, MAF reading, and RPM. The result is a smooth and responsive drive.
