Pedestrian access swing gate is a security access control device commonly used to control the flow of people in and out. It is usually installed at the entrance of subway stations, shopping malls, office buildings, schools and other places with high traffic density. The swing gate consists of a set of movable door wings (usually made of glass or plastic). These door wings will automatically open after verification to allow people to pass, and remain closed if verification fails, effectively preventing unauthorized entry. The swing gate can be used in conjunction with various identity authentication systems such as card swiping, fingerprint recognition, facial recognition, etc. to ensure safe and efficient passage.
