Abstracts

The global Pediatric Orthotics market size is expected to reach \$ 1159.5 million by 2029, rising at a market growth of 7.1% CAGR during the forecast period (2023-2029).

The global pediatric orthotics market is expected to grow at a significant rate due to the increasing prevalence of pediatric orthopedic disorders, such as scoliosis, cerebral palsy, and clubfoot, among others. The market is also driven by the rising awareness about the benefits of orthotics in the treatment of these disorders. North America is the largest market for pediatric orthotics, followed by Europe and Asia-Pacific. The high prevalence of orthopedic disorders in children, coupled with the availability of advanced healthcare infrastructure and favorable reimbursement policies, are the major factors driving the growth of the market in these regions. The market is highly concentrated, with a few major players dominating the market. These players are focusing on product innovation and strategic collaborations to maintain their market position. For instance, in 2020, Ossur launched a new pediatric prosthetic foot, the Pro-Flex LP Junior, which is designed to provide greater stability and comfort to children with lower limb amputations. However, the high cost of orthotics and the lack of awareness about their benefits in developing countries are the major challenges faced by the market. Moreover, the COVID-19 pandemic has also impacted the market negatively, with a decline in elective surgeries and non-urgent medical procedures. Despite these challenges, the market is expected to grow in the coming years, driven by the increasing demand for advanced orthotics and the rising awareness about their benefits in the treatment of pediatric orthopedic disorders.

This report studies the global Pediatric Orthotics production, demand, key manufacturers, and key regions.
