Abstracts

The global PEEK Polymer Interference Screws market size is expected to reach \$ 467 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

PEEK Polymer Interference Screw is an implantable orthopedic sports medicine fixation screw made from polyether ether ketone material. It is mainly used for interface fixation between a graft and the bone tunnel during ligament or tendon reconstruction procedures. These products are typically inserted into the bone tunnel during arthroscopic surgery and secure the graft within the bone through threaded compression, providing mechanical support for graft healing and tendon to bone integration. PEEK Polymer Interference Screws offer good mechanical performance, biocompatibility, fatigue resistance and imaging compatibility, and are widely used in anterior cruciate ligament reconstruction, posterior cruciate ligament reconstruction and other ligament or tendon fixation procedures. The unit price of PEEK Interference Screw is typically several hundred dollars, and the gross profit margin is usually between 50% and 70%.

The upstream supply chain of PEEK Polymer Interference Screws mainly includes medical grade PEEK resin, precision rods or molded materials, CNC machining equipment, precision molds, thread machining tools, sterile packaging materials, sterilization services and implant grade quality testing services. Material purity, mechanical strength, fatigue performance, thread machining accuracy, dimensional stability and biocompatibility are key factors affecting product performance. The midstream consists of sports medicine implant and orthopedic device manufacturers, with core processes including material selection, structural design, precision machining or injection molding, thread forming, surface treatment, cleaning and sterilization, size

series development, regulatory approval and clinical promotion. Downstream customers mainly include orthopedic departments of general hospitals, sports medicine centers, arthroscopic surgery centers, specialty hospitals, ambulatory surgery centers and distributor channels. End demand is jointly influenced by ligament reconstruction procedure volume, surgeon preference, hospital procurement policies, reimbursement conditions and brand based clinical education capabilities.

The PEEK Polymer Interference Screw market is an important segment within orthopedic sports medicine implantable consumables, with core demand from anterior cruciate ligament, posterior cruciate ligament and other ligament or tendon reconstruction procedures. Compared with metallic interference screws, PEEK offers good biocompatibility, mechanical stability and imaging compatibility, helping reduce metal artifacts and support postoperative imaging evaluation. Compared with absorbable interference screws, PEEK Polymer Interference Screws offer advantages in long term structural stability and fixation reliability. As a result, these products have stable clinical demand in sports medicine, arthroscopic surgery and ligament reconstruction. Future competition will focus on material performance, thread design, fixation strength, implantation convenience, size portfolio completeness and surgeon preference, while companies with strong sports medicine portfolios, clinical education capabilities and broad channel coverage will be better positioned.
