The global Peelable Ultrathin Copper Foil market size is expected to reach \$ 269 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

Peelable Ultrathin Copper Foil is a high-end copper foil product usually composed of an ultrathin copper layer and a temporary carrier foil. During PCB or advanced packaging manufacturing, the carrier layer provides mechanical support, while the ultrathin copper layer can be transferred and retained after peeling. It is mainly used in high-density interconnects, IC substrates, chip packaging, flexible circuits, and advanced electronic materials where fine lines, thin thickness, and high dimensional stability are required. In 2025, global Peelable Ultrathin Copper Foil production reached approximately 8583 tons, with an average global market price of around US\$15943 per ton. The production capacity for Peelable Ultrathin Copper Foil in 2025 was approximately 10000 tons. The typical gross profit margin for Peelable Ultrathin Copper Foil is between 20% and 40%.

Peelable Ultrathin Copper Foil market is driven by the rapid development of advanced packaging, high-end PCBs, IC substrates, 5G communication, AI servers, and miniaturized consumer electronics. As circuit linewidth and spacing continue to shrink, demand for thinner copper foil with stable peelability, low surface roughness, and good process compatibility is increasing. The market is relatively technology-intensive, with suppliers focusing on ultra-thin thickness control, carrier bonding/peeling performance, surface treatment, and yield improvement. In the future, growth will mainly come from high-density packaging substrates, ABF substrates, fine-line PCBs, and next-generation electronic devices.
