The cat's eye reverse spyglass is a spy tool designed specifically for the 'cat's eye' on the door. Its working principle is to use the opposite principle of cat's eye imaging. By changing the order of the internal objective lens and eyepiece, the observer can directly peek into the indoor situation from the outside through the cat's eye in the opposite direction. Even in poor lighting conditions, the indoor environment can be clearly observed. The tool looks like a small single-hole telescope, about ten centimeters long, light in weight, and easy to carry.
