According to our (Global Info Research) latest study, the global PEG Esters market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PEG esters are formed by the reaction of polyoxyethylene glycol (X-moles) with a fatty acid. Such esters are generally water soluble and behave as emulsifiers. They do not hydrolyse in water and prevent mould growth, therefore preferred in products containing water. PEG esters have a range of applications. In the pharmaceutical industry, they are sometimes used as excipients in drug formulations to improve solubility, stability, and bioavailability of drugs. In cosmetics, PEG esters can be found in various formulations such as creams, lotions, and shampoos, where they serve as emulsifiers, stabilizers, or surfactants. Additionally, PEG esters are used in the food industry as emulsifying agents and to improve the texture of certain food products.
