Abstracts

The global PEG Esters market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

PEG esters are formed by the reaction of polyoxyethylene glycol (X-moles) with a fatty acid. Such esters are generally water soluble and behave as emulsifiers. They do not hydrolyse in water and prevent mould growth, therefore preferred in products containing water. PEG esters have a range of applications. In the pharmaceutical industry, they are sometimes used as excipients in drug formulations to improve solubility, stability, and bioavailability of drugs. In cosmetics, PEG esters can be found in various formulations such as creams, lotions, and shampoos, where they serve as emulsifiers, stabilizers, or surfactants. Additionally, PEG esters are used in the food industry as emulsifying agents and to improve the texture of certain food products.

This report studies the global PEG Esters production, demand, key manufacturers, and key regions.
