## Abstracts

PEGylating has been widely used as a post-production modification methodology for improving biomedical efficacy and physicochemical properties of therapeutic proteins since the first PEGylated product was approved by Food and Drug Administration in the early 1990s.

Scope of the Report:

This report focuses on the PEGylated Proteins in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The threat of substitutes arises when there are similar products developed by competitors which satisfy the market needs. When consumers have access to substitute products which can satisfy their market needs, then manufacturers and suppliers lose their bargaining power. Consumers are able to purchase competitor's products if they are not satisfied with product price or quality. In order for suppliers to tackle the challenge of threat of substitutes, they have to innovate products which meet the needs of their target market segments.

The worldwide market for PEGylated Proteins is expected to grow at a CAGR of roughly 3.9% over the next five years, will reach 3910 million US\$ in 2023, from 3230 million US\$ in 2017, according to a new GIR (Global Info Research) study.
