The global Pellet 3D Printer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pellet 3D Printer is a 3D printing technology that uses granular raw materials (usually powder or granules) to create three-dimensional objects. Unlike traditional 3D printing techniques such as fused deposition modeling, particle 3D printers print directly using raw material particles without first converting the raw material into a filament or liquid state.
