According to our (Global Info Research) latest study, the global Pellet Mill Conditioner market size was valued at US\$ 218 million in 2024 and is forecast to a readjusted size of USD 279 million by 2031 with a CAGR of 3.6% during review period.

Pellet Mill Conditioner is an integral component of the pelleting system, designed to prepare raw materials—such as feed, biomass, or other powdery substances—before they enter the pellet mill. It operates by introducing controlled amounts of steam, moisture, and heat while mechanically mixing the material to achieve optimal consistency and temperature. This pre-conditioning process softens the ingredients, enhances starch gelatinization and protein denaturation, and improves the overall binding characteristics of the material. As a result, the conditioner plays a critical role in ensuring higher pellet quality, increased production efficiency, and reduced wear on the pellet mill components.
